

MTC510-UD600-EGlass-35%RW

SHD2465-300P Prepreg Technical Datasheet

Fibre Specification.	Areal weight	600 g/m ²
	Weave Style	UD
	Width	300 mm
	Fibre Description	HYBON 2002 1200TEX E GLASS ROVING
Prepreg specification.	Prepreg areal weight	923 g/m ² nominal
	Prepreg thickness	0.503 mm nominal
	Volatile content	≤1% by weight
	Resin Type	MTC510
	Resin content	35 ± 3%
	Fibre volume fraction	46.9 ± 3%
	Tack level	Medium

Issued 10th December 2021

Disclaimer: Technical advice, instruction, data or recommendation, whether verbal or in writing, is given in good faith. Castro Composites providing any such advice gives no warranty or guarantee, whether express or implied, in relation to such advice.

Customers must carry out their own tests and assessments as necessary in order to determine the quality and suitability of the product for their particular application and circumstances. Such testing should be performed under conditions identical to those to which the final component/product may be subjected.

Values listed in any Castro Composites document are for typical properties of the product or substance in question and are not intended to be used in establishing either statistical specifications nor engineering basis values. They do not constitute either minimum or maximum values for the product or substance in question.
